### **Abstract:**

- Covid -19 pandemic is a dynamic contagious respiratory infection with unpredicted public health emergency of the decade and the magnitude brought to light the fragility of the public healthcare system globally beyond any experts imagination.
- Our health and even survival of life is at Catastrophy from anthropogenic activity. One can save from this deadly pandemic from developing active immunity with exposure to mild infection and passive immunity from vaccination, meantime follow the respiratory etiquette and hygiene best possible way.
- During the pandemic lock down period we learnt the lessons how to manage the crisis on food, medical supply, cash support, personal hygiene materials, psychological support and others from various sources to help each others.
- Nature also taught us a lesson how to overcome the climate change Catastrophy for the human survival on earth, which needs to be pursued, propagated and practiced based on science, what measures we should take at global, national and individual level on carbon footprint.
- The important issues on "Lessons Learnt During Covid-19: To Move Forward" will be discussed.

**ALL ARE WELCOME**
