Abstract:-

Gastric paresis is the delayed emptying of stomach content. Results in nausea, vomiting, bloating, stomach fullness after eating, early satiety and abdominal pain causing significant morbidity. Severe dehydration is a concern during hot weather with humidity. The factors contribute for gastroparesis are: Diabetes, Viral infection-rotavirus, Post surgical of GI tract, Drugs- Opioid pain relievers, antidepressants, allergy medicines, Autoimmune gastrointestinal dysmotility, Neurological disorders, Fear and apprehension accelerate the symptoms, Idiopathic. The magnitude of the gastroparesis is 21.5/100000 population diagnosed by scintigraphy.

During the talk we will cover the measures to mitigate the illness with treatment.

All are welcome!
