

# 10TH GRANTHAM LECTURE ON CLIMATE CHANGE

NEW INSIGHTS FROM CLIMATE  
SCIENCE & THE FUTURE OF THE  
**PARIS AGREEMENT**

**PROF. STEFAN RAHMSTORF**

University of Potsdam, Germany

Has there been a slowdown of global warming, and what do we make of the recent warming spike and record-breaking temperatures during the past 3 years?

How and to what extent are recent extreme weather events linked to human-caused climate change? Is the Jet Stream going 'weird'? Has the Gulf Stream System slowed down? Have critical tipping points already been passed in the climate system? How much sea-level rise are we already committed to? Can we still limit warming to well below 2°C as agreed by all nations in Paris last December?

**23 November 2016 | 3.30 pm**

**Divecha Centre for Climate Change Auditorium**

Indian Institute of Science,  
Bengaluru.
